

‘Sleeping’ Gas & LPG Alarm

EtherAlert™ Gas Attack Alarm

- ✓ Detects both ‘Sleeping-gas’ & LPG
- ✓ Panic Switch
- ✓ Effective
- ✓ Easy to Fit
- ✓ Simple to Use
- ✓ Low Power
- ✓ Piercing Siren

● The Need for EtherAlert™

Reports are on the increase of ether-based narcotic sprays (commonly called ‘sleeping gas’) being used in robberies. This is a real threat to those who enjoy spending the night in their motorhome, caravan, apartment or boat. When released into a confined space, these sprays put sleeping occupants into a heavily sedated state. Robberies are then easy to carry out and occupants wake several hours later with no knowledge of the robbery.

The EtherAlert sensor will also reliably detect LPG (butane and propane) to give an early warning of a build up of these explosive gases.

● Effective Protection

The EA1000 has been designed to protect against these attacks. A sensor mounted close to the sleeping area detects ether-based gases at very low levels before they can take effect. This triggers an ear-piercing siren to deter intruders, wake the occupants and warn others close by. An optional high-visibility lamp can also be connected to flash when the alarm goes off.

A separate Panic Switch is also supplied with the unit. This can be used to manually sound the siren and send any prowlers or unwelcome visitors running.

● Neat and Unobtrusive

The sensor is small, neat and stylish. The main electronic control box is powered from the 12V supply of the vehicle and can be installed anywhere

convenient (including in a cupboard). The extremely loud alarm siren is housed separately giving further flexibility to the installation.

● Simple to Use

For security, a key switch on the control unit is used to activate the unit. Lamps on the control unit indicate system power, sensor health and alarm conditions. A push button is provided to test the system. The EA1000 is factory calibrated and requires no replaceable parts or user adjustment.

● Low Power

The latest technology sensors combine high performance with very low power consumption.

● Other Models

Two sensor units (EA2000) and cigarette socket powered plug-in units (EA1200) are also available.

Specification	Model EA1000
Detection:	Ether- based gases LPG (butane & propane)
Operating voltage:	12 Vdc (10 to 16 Vdc)
Current consumption:	60 mA (normal operation) 200 mA (alarm)
Temperature range:	-20 C to +40 C
Siren volume:	105dB
Sensor size:	26x32x25(depth) mm
Control unit size:	65x65x28 mm

Specification subject to change without notice
