VAL-24V-RP - Gas Solenoid Valve (24V)
£100.80 inc VAT

[Add to Cart](#)

The Nereus VAL-24V-RP gas solenoid valves contain a micro-circuit to reduce power consumption and improve reliability. The circuit provides a pulse of current for a few seconds to open the valve and then automatically reduces to a much lower 'holding' current. This system provides a reliable on/off switching action over the full voltage range with much reduced power consumption.

These valves feature a stainless steel body and also run much cooler than normal solenoid valves which improves their reliability.

Valves are supplied fitted with 1m of marine grade cable.

Specification	VAL-24V-RP
Operating Voltage	24Vdc (18 to 32V)
Switching current	0.5A
Continuous 'holding' current	0.15A
Continuous 'holding' power	3.6W
Valve body material	Stainless steel 303
Cable fitted	1m, marine grade
Gas inlet/outlet threads	1/4" BSPP
